

C.2.4 Exam Practice 4: Operational Procedures

Date: 5/5/2026, 1:20:31 PM

Time Spent: 13:00

Score: 83%

Passing Score: 80%

Question 1

✓ Correct

Which of the following are direct advantages of integrating AI into software applications?
(Select two.)

☒ Enhanced Functionality ✓ Correct

☒ Increased capabilities ✓ Correct

☐ Faster Installation

☐ Reduced cost

Explanation

Integrating AI into software into software applications increases the functionality of the program and can add to the existing capabilities of the program.

Adding AI into a software application does not make the installation complete faster, nor does it change the price of the software application.

Question 2

✔ Correct

A new employee is going over the site safety handbook about the correct ways of carrying objects so they do not damage the object or get injured. What is this called?

- ☐ Trip hazard
- ☐ Safety goggles
- ☐ Air filter mask
- ☒ Lifting techniques ✓ Correct

Explanation

Lifting techniques are included in site safety handbooks, and the guidance set out in job instructions shows employees that lifting a heavy object in the wrong way can damage their back or cause muscle strains and damage the object.

Safety goggles are used to minimize the risk of burns from corrosive materials, such as broken batteries, cellphones, and tablets, or irritation from particles, such as toner or dust.

An air filter mask that fits over the mouth and nose is a recommended face covering when working with compressed air, toner spills, or working in a dusty environment. An air filter mask will not protect the eyes.

Trip hazards are caused by putting any object in pathways where people walk.

resources\questions\pt_core2_220_1202_4_4_002.question.xml

Question 3

✔ Correct

When a project team is constructing a change request document, a part that needs to be included is the number of devices, users, or customers that will be affected by the change. What is this part of the document?

- ☐ Rollback plan
- ☐ End-user acceptance
- ☐ Purpose of the change
- ☒ Scope of the change ✓ Correct

Explanation

Scope of the change may include cost, timescales, and amount of devices involved. The scope should also include the factors by which the success or failure of the change can be judged.

The purpose of the change is the business case for making the change and the accumulated benefits.

End-user acceptance must be accounted for when a change of plan is implemented. It can be difficult for people to adapt to new processes and easy for them to magnify minor problems into major complaints.

A rollback plan is when a change can be reversed if it has harmful or unforeseen consequences.

resources\questions\pt_core2_220_1202_4_2_004.question.xml

Question 4

✓ Correct

A technician is implementing a Linux shell script, where each statement comprising the actions the script will perform is then typically added on separate lines. Which of the following is this?

☐ .ps1☒ .sh ✓ Correct☐ .bat☐ .vbs**Explanation**

.sh is the Linux shell script extension by convention. Every shell script starts with a shebang line designating which interpreter to use, such as Bash or Ksh. It includes a series of commands that run consecutively to carry out tasks.

.ps1 is the PowerShell script file. Microsoft provides the Windows PowerShell Integrated Scripting Environment (ISE) for rapid development.

.vbs is the VBScript file extension. VBScript predates Powershell. The wscript.exe interpreter executes VBScript by default.

.bat is the Windows batch file extension. A shell script for the basic Windows CMD interpreter is often described as a batch file.

Question 5

✕ Incorrect

What type of data can be associated with a specific person or use an anonymized or de-identified data set for analysis and research?

- ☐ PII
- ☐ Open-source license
- ☐ Healthcare data ✓ Correct
- ☒ Personal government-issued information ✕ Incorrect

Explanation

Healthcare data refers to medical and insurance records plus associated hospital and laboratory test results.

Personal government-issued information is issued to individuals by federal or state governments. Personal information may be social security numbers, passports, driving licenses, and birth/marriage certificates.

Personally identifiable information (PII) is data that can be used to identify, contact, locate an individual, or, in the case of identity theft, impersonate that individual.

The open-source license makes it free to use, modify, and share and makes the program code used to design it available.

Question 6

✔ Correct

A technician is working with a customer who is becoming abusive and unreasonable on a phone call. Which of the following skills should the technician use in this instance? (Select three.)

☒ Hang up. ✔ Correct☐ Be judgmental.☒ Do not take complaints personally. ✔ Correct☒ Identify early that the customer is angry. ✔ Correct**Explanation**

Identifying early that the customer is angry and trying to calm the situation down by using a low voice and soothing language and focusing on positive actions.

Do not take complaints personally, and do not express any anger toward the customer.

Hang up and be guided by whatever policy an organization has in place, but in general, if a customer is abusive or threatening, issue a caution to warn them about this behavior.

Being judgmental is not one that will help in this situation. Do not assume that the customer lacks knowledge about the system.

resources\questions\pt_core2_220_1202_4_7_006.question.xml

Question 7

✔ Correct

A customer has filed a ticket for a problem to be fixed. When the customer opens the ticket, there will be a record that shows what they can expect from the support team. By explaining these conditions to the customer, the company is ensuring they are meeting which of the following requirements for support procedures?

☒ Proper documentation ✓ Correct

☐ Clarify customer statements

☐ Follow-up statement

☐ Distractions

Explanation

Proper documentation should be provided so that the customer knows what to expect in terms of supported items, how long incidents may take to resolve, and when they can expect an item to be replaced instead of repaired.

Ask the customer for clarifying statements about how they expect the work to proceed, when it will be done, their concerns about the costs, and the impact of the work.

Following up with a customer to provide general feedback on what caused the issue, how it was fixed, and assurance that the issue is now fixed and unlikely to recur.

A distraction is anything that interrupts an employee from the task of resolving the ticket.

Question 8

✕ Incorrect

An administrator is backup chaining a database with the type of backup that utilizes a moderate time and storage requirement. What type of backup is this?

- ☐ Retention
- ☐ Full with incremental
- ☒ Frequency ✕ Incorrect
- ☐ Full with differential ✓ Correct

Explanation

Full with differential means that the chain starts with a full backup and then runs differential jobs that select new files and files modified since the original full job.

Full with incremental means that the chain starts with a full backup and then runs incremental jobs that select only new files and files modified since the previous job.

Frequency is the period between backup jobs. If the edits are much more difficult to reconstruct, the backup frequency might need to be measured in hours, minutes, or seconds.

Retention is the period that any given backup job is kept for. Short-term retention is important for version control and for recovering from malware infection.

Question 9

✔ Correct

What tool will distinguish client accounts and provide support for recording and reporting billable support activity?

- ☐ RDP
- ☐ VNC
- ☒ RMM ✓ Correct
- ☐ VPN

Explanation

Remote Monitoring and Management (RMM) tools are principally designed for use by managed service providers (MSPs).

Remote Desktop Protocol (RDP) implements terminal server and client functionality. RDP authentication and session data are always encrypted.

A Virtual Private Network (VPN) establishes a tunneled link that joins a local computer to a remote network. Establish a VPN link and then use a remote desktop to connect to a host on the private network.

Virtual Network Computing (VNC) is a freeware product with similar functionality to RDP. It works over TCP port 5900. Not all versions of VNC support connection security.

Question 10

✔ Correct

Which of the following devices come in the form of adapters, trailing sockets, or filter plugs, with the protection circuitry built into the unit?

- ☐ Antistatic bags
- ☒ Surge suppressor ✓ Correct
- ☐ Compressed air blaster
- ☐ Anti-ESD strap

Explanation

Surge suppressors are passive protection devices that can filter out the effects of surges and spikes.

A compressed air blaster can be used to dislodge dust from difficult-to-reach areas. When performing this sort of maintenance within a controlled area, wear an appropriate air-filter mask and goggles.

Antistatic bags are packages that reduce the risk of ESD because it is coated with a conductive material.

Anti-ESD wrist straps should fit snugly around the wrist or ankle so that the metal stud makes contact with the skin. Wearing an anti-ESD wrist strap causes the static charge to dissipate more effectively.

Question 11

✕ Incorrect

An administrator uses a backup rotations scheme that labels the backup tapes in generations. What is this called?

☐ Frequency

☐ GFS ✓ Correct

☐ Synthetic

☒ 3-2-1 backup rule ✕ Incorrect

Explanation

Grandfather-father-son (GFS) is a backup rotation scheme that uses son tapes to store the most recent data and have the shortest retention period. Grandfather tapes are the oldest and have the longest retention period.

3-2-1 backup rule is a best-practice maxim that users can apply to their backup procedures to verify that they are implementing a solution to mitigate the widest possible range of disaster scenarios.

The synthetic full backup is not generated directly from the original data but instead assembled from other backup jobs.

Frequency is the period between backup jobs. If the edits are much more difficult to reconstruct, the backup frequency might need to be measured in hours, minutes, or seconds.

Question 12

✓ Correct

Most vendors have recycling systems for what types of products? (Select three.)

☐ Voltage

☒ Device ✓ Correct

☒ Toner ✓ Correct

☒ Battery ✓ Correct

Explanation

Recycling used toner cartridges is offered at most vendors. The products in toner powder are not classified as hazardous to health.

Batteries must be disposed of through an approved waste facility. Swollen or leaking batteries from devices must be handled carefully and stored within appropriate containers. Gloves and safety goggles may be used to minimize the risk of burns from the corrosive material.

Device disposal can be donated, and if it can not be reused, it must be disposed of through the approved waste facility.

Voltage is the potential difference between two points measured in volts (V).

22.2.7 Materials Handling and Responsible Disposal

resources\questions\pt_core2_220_1202_4_5_005.question.xml

Question 13

✓ Correct

Which of the following contains information about ingredients, health hazards, precautions, and first aid information and what to do if the material is spilled or leaks?

- ☐ Proper power handling
- ☒ MSDS ✓ Correct
- ☐ Surge suppressor device
- ☐ Electrical fire safety

Explanation

A material safety data sheet (MSDS) includes information about recycling any waste product or disposing of it safely by government regulations.

Electrical fire safety ensures that equipment is properly stored and away from any flammable material and that electrical wires do not start a fire.

Surge suppressor devices come in the form of adapters, trailing sockets, or filter plugs, with the protection circuitry built into the unit. These devices offer low-cost protection to one or two pieces of equipment.

Proper power handling is done with the correct training. PC power supply units can carry dangerously high levels of voltage. Disconnection of power should be done before repairing a PC.

Question 14

✔ Correct

An employee uses an option to ask for help from a technician with an invitation file protected by a passcode. What is this option?

☒ Remote Assistance ✓ Correct

☐ RDP

☐ VPN

☐ RMM

Explanation

Microsoft's Remote Assistance app allows a user to ask for help from a technician or co-worker through an invitation file protected by a passcode. The helper opens the invitation file to connect to the remote system.

Remote Monitoring and Management (RMM) tools are principally designed for use by managed service providers (MSPs).

Remote Desktop Protocol (RDP) implements terminal server and client functionality. RDP authentication and session data are always encrypted.

A Virtual Private Network (VPN) establishes a tunneled link that joins a local computer to a remote network. Establish a VPN link and then use a remote desktop to connect to a host on the private network.

Question 15

✔ Correct

A company has hundreds of employees who use the same software on their computers, so they offer a company product key to access the software. What is this product?

- ☐ DRM
- ☒ Corporate-use license ✓ Correct
- ☐ Personal license
- ☐ Data retention requirements

Explanation

A corporate-use license is for multiple users, which means the company can install the software on an agreed-upon number of computers for its employees to use simultaneously. The company will offer a valid license with the product key. These can be non-expired licenses as well.

A personal license allows the product to be used by a single person at a time, though it might permit installation on multiple personal devices.

Data retention requirements are regulations that set a maximum period for data retention. The regulation might also demand that information be retained for a minimum period.

Digital music and video are often subject to copy protection and digital rights management (DRM).

Question 16

✔ Correct

A user uses a scripting language based on Microsoft's Visual Basic programming language. Which of the following extensions is used?

- ☐ .py
- ☐ .js
- ☒ .vbs ✔ Correct
- ☐ .bat

Explanation

.vbs is the VBScript file extension. VBScript predates PowerShell. The wscript.exe interpreter executes VBScript by default.

.bat is the Windows batch file extension. A shell script for the basic Windows CMD interpreter is often described as a batch file.

.js is the JavaScript file extension. JavaScript is a scripting language designed to implement interactive web-based content and web applications. Most web servers and browsers are configured with a JavaScript interpreter.

.py is the Python file extension. Python is a general-purpose scripting and programming language that can develop both automation scripts and software applications.

Question 17

✔ Correct

An employee is working with a substance that can potentially harm them. Which of the following should they use? (Select two.)

☒ Safety goggles ✔ Correct

☐ Lifting techniques

☒ Air filter mask ✔ Correct

☐ Fuse

Explanation

Safety goggles are used to minimize the risk of burns from corrosive materials, such as broken batteries, cellphones, and tablets, or irritation from particles, such as toner or dust.

An air filter mask that fits over the mouth and nose is a recommended face covering when working with compressed air, toner spills, or working in a dusty environment. An air filter mask will not protect the eyes.

Lifting techniques are included in safety handbooks; the guidance sets out to show employees that lifting heavy objects incorrectly can cause muscle strains, back injuries, and damage to the object.

An electrical device has a fuse appropriate to its maximum current. If the current increases past the fuse capacity, the fuse will blow. However, if the fuse fitted is rated too low, the fuse will blow too easily.

Question 18

✔ Correct

A company uses a control that reminds users when logging in to the company's device of the current software version. What is this control called?

- ☐ Assigned users
- ☐ Knowledge base
- ☒ Splash screen ✓ Correct
- ☐ Acceptable use policy

Explanation

The splash screen is a graphic design element consisting of a window containing an image, logo, and the current software version.

Knowledge base (KB) is a repository for articles that answer frequently asked questions (FAQs) and document common or significant troubleshooting scenarios and examples. Each inventory record could be tagged with a cross-reference to an internal knowledge base to implement self-service support and assist technicians.

Assigned users are when hardware assets such as workstations, laptops, smartphones, tablets, and software licenses might be assigned to individual user accounts.

Acceptable use policy (AUP) sets out what someone can use a particular service or resource for.

Question 19

— Partial

A technician is cleaning a computer and notices dust forming over the fan blades and ventilation slots. What can the technician use to perform dust cleanup? (Select all that apply.)

☐ Natural bristle brush ✓ Correct

☐ Domestic vacuum

☒ Compressed air blaster ✓ Correct

☒ PC vacuum cleaner ✓ Correct

Explanation

A compressed air blaster can be used to dislodge dust from difficult-to-reach areas. When performing this sort of maintenance within a controlled area, wear an appropriate air-filter mask and goggles.

The PC vacuum cleaner can be used to blow air and suction to replace the need for the compressed air canister. Such vacuums should be labeled as toner-safe.

Natural bristle brushes remove dust from inside the system unit, especially from the motherboard, adapter cards, and fan assemblies.

Domestic vacuum appliances should not be used as they can produce high levels of static electricity.

resources\questions\pt_core2_220_1202_4_5_001.question.xml

Question 20

✔ Correct

Management provides employees with written policies and procedures to help them fulfill their tasks. Which of the following procedures requires employees to enroll and identify themselves using secure credentials?

- ☐ End-user termination checklist
- ☐ Procedures for custom installation of software package
- ☐ Assigned users

☒ New-user setup checklist ✔ Correct

Explanation

The new-user setup checklist is part of the onboarding process for new employees and employees changing job roles.

The end-user termination checklist is part of the offboarding process for employees who are retiring, changing job roles, or being fired. Typical tasks include returning and sanitizing devices, releasing software licenses, and disabling account permissions/access.

Procedures for custom installation of software packages include verifying system requirements, validating download/installation source, confirming license validity, adding the software to change control/monitoring processes, and developing support/training documentation.

Assigned users are when hardware assets such as workstations, laptops, smartphones, tablets, and software licenses might be assigned to an individual user account, including an inventory list of all products that the user may be using.
